

# Summative assessment

## Paper prototype:

It is demonstrated in order on how a user might navigate through the application.

1. This is the log in page where the user can log in or chose to click the register button to create an account. If they entered the correct information in the log in page they will be directed to the list of museums (Figure 3)
2. This is the registration page; the user is asked to enter some information. One they have entered the info they can press the register button and a pop up will appear stating if they have successfully created an account or not.
3. Here is a list of the available museums with some key information about them (location, price). The user can click on the museum they wish to read more about which will take them to figure 4.
4. An image of the museum is displayed with a detailed explanation about the museum with a button that allows the user to click if they want to buy a ticket and other stuff.
5. The store is displayed, it shows the list of available items which the user can press the add button next to them to add them to the cart. The total price of it all is showed in the bottom and it is updating every time the user clicks the add button. There is also a button that takes you to the cart.
6. It displays a list of the items the user has chosen with the total price of it all. It also includes a button that takes the user to the payment page.
7. Here the total cost of all the items is displayed, the user can input the amount of money they have. Once the user inputs the money and press the pay button the change will show up if needed. If the payment was successful a pop up will be displayed stating that it has been successful, and a booking reference number and the users full name will also be displayed. But if it hasn't be successful a different pop up will be displayed stating that the transaction wasn't accepted.

## Principles of design

The principles of design are something that everyone should consider while designing and coding their applications. The main ones I looked at were from Norman and Schneiderman's.

### Consistency

My application considers consistency all throughout the program. The colour scheme is always the same and the font and the text colour does not change. This principle was one of the most important ones I considered, the reasons being:

- This application is meant to be easy to use and for everyone, people who are not accustomed to applications might find it difficult to navigate through them since the design of them might change in every page, making the user confused on where to click and how to use it properly.
- Having a good consistent program makes it easier to remember making people willingly coming back to use it instead of another application since they might remember it more.

### Mapping

Mapping is another design principle that I had to take into consideration. This design principle is the relationship between the control and the effect, meaning that the buttons the user might interact with tells them what it does already.

In the case of my application every button told the user what it does before even clicking on it, so the user is less likely to click on it by accident or be confused as to why the page just change or why there is an item they did not want in the basket.

Here are some examples of the buttons inside of the application:

As you can see, they state what each do without needing to click on it.

### Permit easy reversal of actions.

This design principle means that if a user has selected the wrong thing, they can easily go back and fix it. In the case of the application, it has been applied and thoroughly considered. In any point of the program the user can press the back button on their phone and the program will undo what the user has done.

## Addressing user's concern

The way I would address all the users concerns in this program is as follow:

- Allow the user to change the language of the program easily.
- Enable text to speech so people who struggle to read and see can still get informed and can use the application as intended.
- Allow the user to change the current currency to their own.
- Allow the user to change the colours of the application to make it easier for them to see.
- Allow the user to change the size of the fonts in the application.
- Let the user know that their information is not being shared.
- Create a customer service section and a FAQ where we can help users.

Screenshots of the application:

## Museums

The National Museum of China (Chinese: 中国国家博物馆; pinyin: Zhōngguó Guójiā Bówùguǎn) flanks the eastern side of Tiananmen Square in Beijing, China. The museum's mission is to educate about the arts and history of China. It is directed by the Ministry of Culture of the People's Republic of China.

## Museums

The Louvre is the world's largest art museum and a historic monument in Paris, France, and is best known for being the home of the Mona Lisa. A central landmark of the city, it is located on the Right Bank of the Seine in the city's 1st arrondissement (district or ward). Approximately 38,000 objects from prehistory to the 21st century are exhibited over an area of 72,735 square meters (782,910 square feet). Due to the COVID-19 pandemic, the museum was closed for 150 days in 2020, and attendance plunged by 72 percent to 2.7 million. Nonetheless, the Louvre still topped the list of most-visited art museums in the world in 2020.

The State Hermitage Museum is a museum of art and culture in Saint Petersburg, Russia. The second-largest art museum in the world, it was founded in 1764 when Empress Catherine the Great acquired an impressive collection of paintings from the Berlin merchant Johann Ernst Gotzkowsky. The museum celebrates the anniversary of its founding each year on 7 December, Saint Catherine's Day. It has been open to the public since 1852. It attracted 968,604 visitors in 2020, a drop of eighty percent from 2019, due to the COVID-19 pandemic. In 2020 it ranked eleventh on the List of most visited art museums in the world
